Le norme UNI EN

UNI EN Regulations - Die UNI EN-Normen - Les Normes UNI EN

Le norme **UNI EN**, recepite dal CEN, (Commissiön Europeenne de Normalisation), hanno valore in tutta Europa e interessano tutti i tipi di piastrelle, pressate e trafilate, smaltate e non smaltate, di qualunque formato, di sola 1° scelta. Le norme **UNI EN** trovano corrispondenza con alcune modifiche delle nuove norme internazionali **ISO** e si compongono di:

NORME GENERALI

La nuova norma armonizzata **EN 14411** fornisce definizioni, classificazione, caratteristiche e marcatura per le piastrelle di ceramica ed annulla e sostituisce la norma **EN 87**.

La nuova normativa **UNI EN ISO 105454_1** stabilisce le regole per la composizione del lotto di campionamento e sostituisce la precedente norma **EN 163**.

NORME DI PRODOTTO

Le piastrelle di ceramica sono suddivise in gruppi secondo il metodo di formatura ed il grado di assorbimento d'acqua. Sono contraddistinti due gruppi **A** e **B**, in funzione del metodo di formatura:

A Piastrelle estruse (ovvero formate tramite il passaggio della materia allo stato plastico, attraverso un "trafilatore" che costituisce un nastro in seguito tagliato alla misura voluta).

B Piastrelle pressate (ovvero ottenute tramite la pressione della materia prima allo stato di polvere secca, in appositi stampi). Tali piastrelle possono essere smaltate successivamente, o non smaltate.

I gruppi sono a loro volta suddivisi in sottogruppi, secondo il grado di assorbimento d'acqua (porosità) presentato:

- Gruppo B Ia = E ≤ 0,5% **UNI EN 14411_G**
- Gruppo B Ib = 0,5% < E ≤ 3% **UNI EN 14411_H**
- Gruppo B IIa = 3% E ≤ 6% **UNI EN 14411_J**
- Gruppo B IIb = 6% < E ≤ 10% **UNI EN 14411_K**
- Gruppo B III = E > 10% **UNI EN 14411_L**

Le norme definiscono per ogni gruppo di prodotti le dimensioni, le tolleranze dimensionali, le caratteristiche meccaniche, fisiche e chimiche, l'aspetto e la designazione delle piastrelle ceramiche. Le piastrelle dell'attuale gamma Herberia sono tutte ottenute per pressatura e appartengono ai gruppi B Ia, B Ib, B IIa, B IIb, B III.

NORME PER I METODI DI PROVA

Queste norme definiscono i metodi per la determinazione delle caratteristiche dimensionali e di aspetto, delle proprietà fisiche e delle proprietà chimiche.

La norma **14411** fa riferimento ai metodi di prova delle nuove norme **UNI EN ISO 10545**.

The **UNI EN** standards, adopted by the CEN (European Committee for Standardization) are valid throughout Europe and apply to all types of first choice tiles, pressed and extruded, glazed and unglazed, of any size. The **UNI EN** standards are compatible with the latest amendments of the new **ISO** international standards, and include:

GENERAL REGULATIONS

The new harmonised standard **EN 14411** that provides definitions, classifications, features and designation requirement for ceramic tiles and annuls and replaces standard **EN 87**.

The new standard **UNI EN ISO 105454_1** that sets forth the rules for the composition of sample lots, and replaces the previous standard **EN 163**.

PRODUCT REGULATIONS

Ceramic tiles are divided into groups according to how they are formed and their water absorption characteristics. In terms of forming methods, there are two groups: **A** and **B**:

A Extruded tiles (formed by means of passing a malleable paste through an extrusion machine; the resulting band is cut into the desired dimensions).

B Pressed tiles (obtained by pressing powdered raw materials in special moulds). Afterwards, these tiles may be glazed or not.

The groups are broken down further according to their water absorption characteristic (porosity):

- Gruppo B Ia = E ≤ 0,5% **UNI EN 14411_G**
- Gruppo B Ib = 0,5% < E ≤ 3% **UNI EN 14411_H**
- Gruppo B IIa = 3% E ≤ 6% **UNI EN 14411_J**
- Gruppo B IIb = 6% < E ≤ 10% **UNI EN 14411_K**
- Gruppo B III = E > 10% **UNI EN 14411_L**

The regulations define the sizes, the size tolerances, the mechanical, physical and chemical properties, the appearance and designation of the ceramic tiles in each group. The present range of Herberia tiles is entirely composed of pressed tiles and belongs to groups B Ia, B Ib, B IIa, B IIb, B III.

REGULATIONS FOR TESTING METHODS

These regulations define the methods to be used for determining size and appearance characteristics, as well as physical and chemical properties.

Standard **14411** refers to the testing methods of the new **UNI EN ISO 10545** standard.
