

# - TOOX -

Linee essenziali che si rincorrono  
in un moto circolare.  
Una linea bagno dal design moderno  
e funzionale che pronuncia  
un sofisticato elogio alla tecnica.

*Clean lines with smooth circular motions.  
A bathroom collection with a modern and functional  
design, a sophisticated tribute to the technique.*

## SISTEMI DOCCIA GRANDE PORTATA HIGH FLOW RATE SHOWER SYSTEMS

### Specifiche di utilizzo

Temperatura acqua calda in entrata:  
Massima: 85°C  
Minima: 5°C Maggiore della massima richiesta in miscelata  
Consigliabile: 65°C  
Minima differenza tra temperatura fredda e miscelata 10°C

### Pressioni di esercizio

Campo di impiego ottimale consigliato 3-5 bar  
Pressione massima di esercizio: 5 bar  
Pressione minima di esercizio: 0.1 bar  
Le pressioni di esercizio dovrebbero essere tenute bilanciate il più possibile per mantenere il massimo dell'efficienza.  
Quando la pressione è superiore a 5 bar è richiesta l'installazione di riduttori di pressione a monte del miscelatore.

### Dati tecnici

Il miscelatore è fornito di placca estetica per l'installazione del miscelatore a profondità da 75 a 95 mm.  
La manopola di regolazione è pre-settata a 38°C con auto-stop a 52°C per evitare scottature.  
Le entrate sono fornite di filetto G 3/4".

### Raccomandazioni agli installatori

Sono richieste due mandate indipendenti per acqua calda e fredda.  
Il diametro dei tubi consigliato è di 22mm per impianti a bassa pressione.  
Se sono installati più di un miscelatore, il diametro minimo richiesto è di 28mm.  
Assicurarsi di una adeguata portata per entrambe le mandate.  
Richiesto scarico a pavimento con capacità  $\geq 60$  l/min.

### Use specifications

Temperature of the hot water:  
Maximum: 85°C  
Minimum: 5°C higher than the maximum temperature requested when mixed  
Suggested: 65°C  
Minimum difference between cold and mixed water 10°C

### Pressure of working

Suggested optimal pressure: 3-5 bar  
Maximum pressure of working: 5 bar  
Minimum pressure of working: 0.1 bar  
The working pressures should be kept as balanced as possible, in order to obtain the maximum efficiency.  
When the pressure is above 5 bar, pressure reducers must be installed.

### Technical data

All mixers come with an aesthetic plate to install it at a depth between 75 and 95 mm.  
The thermostatic lever is preset at 38°C with auto-stop at 52° to avoid scalding.  
The inlets have a G 3/4" thread.

### Recommendations for the installers

Two independent inlets, one for hot and one for cold water, must be used.  
The suggested diameters of the tubes for low pressure plants is 22mm.  
If more than one mixer is installed, the minimum diameter must be 28mm.  
Make sure that you have an adequate flow rate for both outlets.  
Floor outlet with  $\geq 60$  l/min minimum capacity required.

## SISTEMI CON COLLETTORI A PIÙ VIE

### SYSTEMS WITH MANIFOLDS

Nei sistemi di comando doccia e vasca con collettori a più vie, ogni collettore (o via) alimenta una sola funzione, ad es. doccia, cascata, nebulizzatori o bodyjet.

Ogni singolo collettore ha un'uscita sia a destra che a sinistra, per gestire in fase di progettazione ed installazione la realizzazione dell'impianto in modo più semplice.

Mentre l'uscita da un lato del collettore alimenterà la funzione prescelta, l'uscita dall'altro lato dovrà essere chiuso con un tappo. (fig. 2 arancio)

In particolari circostanze, come nel caso dei bodyjet, possono essere utilizzate contemporaneamente entrambe le uscite, destra e sinistra del singolo collettore, al fine di alimentare tutti i getti della stessa funzione, dividendo la portata d'acqua tra le due uscite, destra e sinistra. (fig. 2 verde)

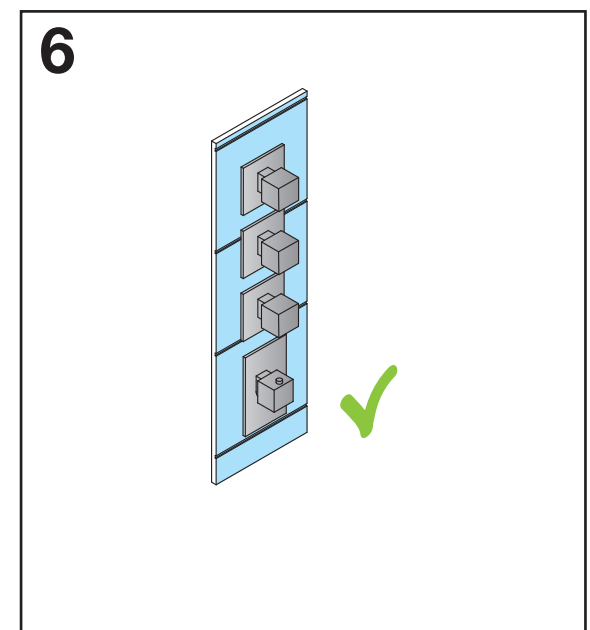

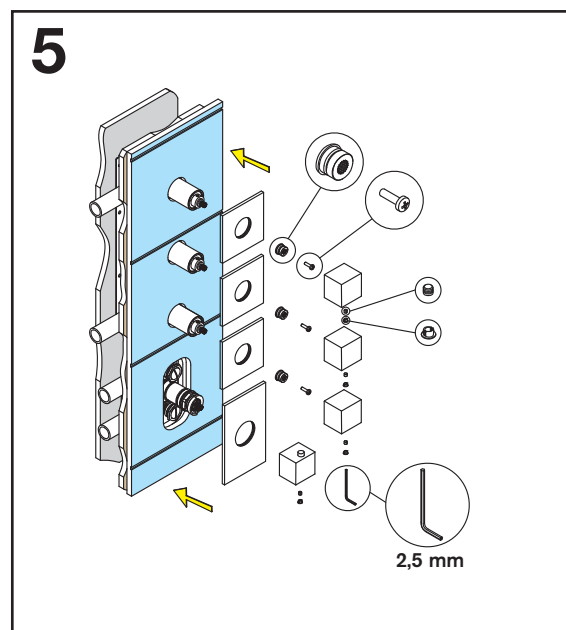

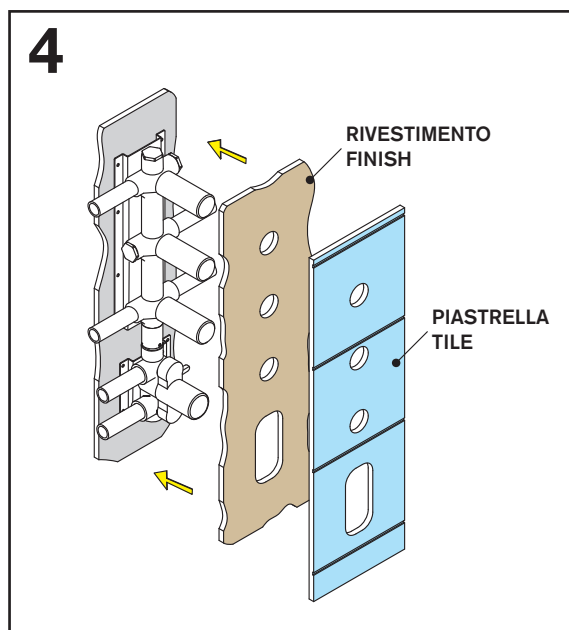

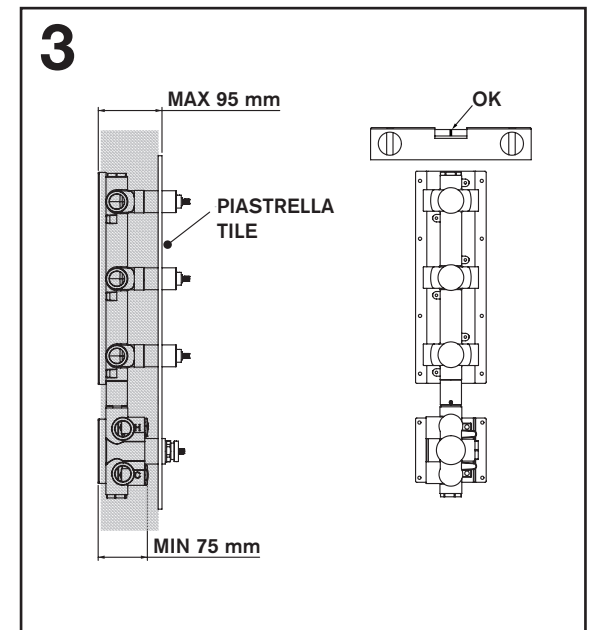

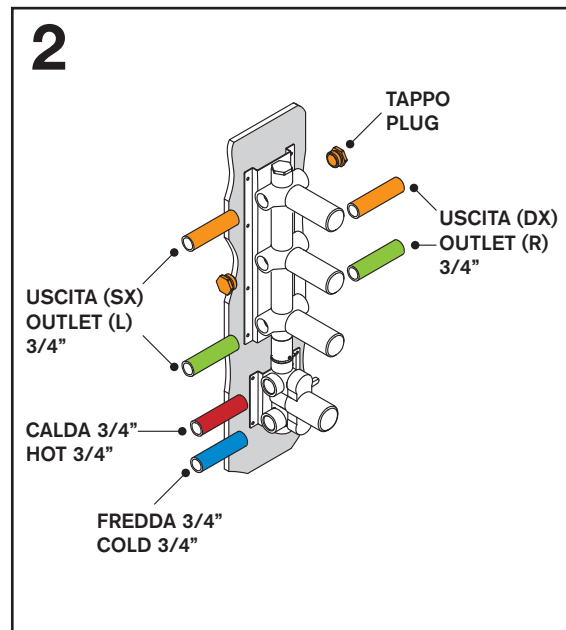

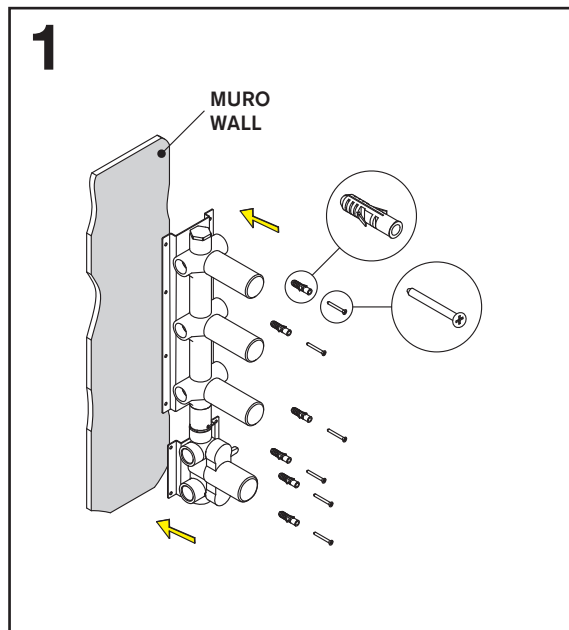

On bath and shower systems with manifolds, every manifold (or outlet) supplies water to only one function, e.g. rain shower, waterfall, nebulizers or bodyjet.

Each manifold has an exit on the right and one on the left, so that it is easier to plan the water plant and install it more easily.

While the exit on one end of the manifold will supply water to the desired outlet, the one on the other side will have to be closed with a cap. (fig. 2 orange)

On particular circumstances, for example when using bodyjets, both exits can be used contemporarily, in order to split the water flow between the two outlets, right and left.

(fig. 2 green)
